

IN THE CLAIMS

Please cancel Claims 1-6, without prejudice.

Please add new Claims 7-14 as follows:

7. (New) A printed circuit board for surface mounting of electrical components including a surface mounted device antenna with a ceramic substrate and at least one resonant conductor track structure, the printed circuit board comprising a ground metallization configured to substantially surround the antenna, and to connect to one end of the conductor track structure, the antenna comprising a first supply lead configured to connect one end of a first resonant track structure of the antenna to a ground potential and a second supply lead configured to couple an electromagnetic wave to be emitted into the antenna, which first track structure has a plurality of conductor sections, while the length of the conductor track structure is dimensioned so as to excite a desired first resonant frequency, and the paths of the conductor sections and the spacings between the conductor sections are configured to excite a first harmonic of the first resonant frequency.

8. (New) An antenna as claimed in claim 7, comprising a second resonant track structure, one end of which is connected to the second supply lead and the length of which is configured dimensionally to excite at least one of a desired second resonant frequency and a harmonic of the second resonant frequency.

9. (New) An antenna as claimed in claim 8, wherein the spacing between the first and second track structures is configured such that the resonant frequencies of the antenna are excited by a combined capacitive and resonant coupling of the electromagnetic wave to be emitted.

10. (New) An antenna as claimed in claim 8, wherein the first track structure has conductor sections of different widths.

11. (New) An antenna as claimed in claim 7, wherein at least one of the first and second track structure has conductor sections of different widths.

12. (New) A telecommunications device with a printed circuit board as claimed in claim 7.

13. (New) A telecommunications device with an antenna as claimed in claim 7.

14. (New) A telecommunications device with an antenna as claimed in claim 7, wherein the antenna is a printed wire antenna.
